

Executive Report Ethical Hacking

MetalBin S.A

BLACK BOX SCENARIO: Guest WiFi → Only printer visible (192.168.10.222:9100)
ETHICAL HACKING EXECUTIVE REPORT METALBIN S.A. - LAB METALCORP
CYBERSECURITY Date: 13/06/2026 | Responsible: Andrew Alba | v1.0

 RED ALERT: CRITICAL VULNERABILITIES GUEST WIFI

BLACK BOX SCENARIO

Guest WiFi → access to exposed printing service

1. EXECUTIVE SUMMARY

A security evaluation was conducted in a Black Box scenario from the Guest WiFi. During the tests, access to the exposed printing service was confirmed, and it was validated that network segmentation limits lateral movement towards other zones of the environment.

2. CRITICAL FINDINGS

V-001 HIGH: Exposed printing service (192.168.10.222:631)

- The CUPS service responded from the testing network.
- Risk: unnecessary exposure of a print management service.

V-002 HIGH: Access to JetDirect port (192.168.10.222:9100)

- Port 9100 was accessible from the testing network.
- Risk: additional attack surface for the printer.

V-003 CONTROLLED: Protected network perimeter

- Pivoting to the next segmentation was not achieved.
- Environment defense and hardening limited the attack progression.

3. IDENTIFIED STRENGTHS

- Win7 OT, Windows 11, Servers correctly isolated
- DMZ protected by firewall rules.
- The router/pfSense did not present confirmed exploitable vulnerabilities in the reviewed ports.

4. RISK MATRIX

Finding	Likelihood	Impact	Risk	Priority
Exposed pfSense Web	Medium	Medium	Medium	Medium
Hp JeDirect 9100-Printer	High	Critical	High	Inmediate
Exposed Printing Service	High	High	Medium	Medium

4.1 What was found

Finding	Description	Severity
F-001 — Exposed CUPS	Printer outside the firewall with port 631 without authentication and open access from the entire network	CRITICAL
F-002 — Open JetDirect	Port 9100 without authentication, print traffic in clear text, no source restriction	HIGH
F-003 — pfSense WebUI	Management panel accessible from the entire LAN without source IP restriction	MEDIUM

5. BUSINESS IMPACT

- The exposed printer increases the attack surface.
- Segmentation prevented jumping to more sensitive zones.
- Current hardening reduced the potential impact of the attack.

6. 24-HOUR ACTIONS

- Review and restrict the access rule to the printer.
- Limit ports 631 and 9100 only to authorized hosts.
- Maintain the hardening of the firewall/router.

- Revalidate segmentation after changes. Status: CLOSED AS EXPOSURE FINDING + RECOMMENDED HARDENING

Status: CLOSED AS EXPOSURE FINDING + RECOMMENDED HARDENING Signature:
